

The study consists of ACS and post-CABG (6 month window) and pre-CABG patients.

Study participants must meet ALL of the following criteria:

- Patient has AT LEAST ONE of the following conditions:
  - Diabetes (Type I or Type II)
  - Compromised renal function (Cr > 1.2 mg/dl or creatinine clearance less than 50)
  - TIMI Risk Score  $\geq$  3
  
- Presents (within past 6 months) with a high-risk acute coronary syndrome (e.g., Unstable Angina, STEMI or NSTEMI) or has undergone or is scheduled for CABG within 6 months of implantation.
- Has already undergone coronary angiography and revascularization, unless the physician determines it is appropriate to implant before or during the planned procedure.
- Lives in a geographic area in close proximity (within 60 minutes by EMS) to any hospital that can treat AMI.
- Patients (men or women) at least 21 years of age. Women of childbearing age must have a negative pregnancy test or confirmation of one of the following:
  - Post-menopausal or amenorrheic during the past year
  - Surgically sterilized
  - Using an effective contraceptive method
